

Program notes.

- I'm not exactly sure if the programs work or not, they compile but that's about all I know.
- They should work in theory and I've commented everything so you know what is happening.
- Whenever I try to debug them and run the following command

`LDRB r3, [r0], #1` ; Copy the element pointed at by r0 to r3.

I get this error *** error 65: access violation at 0x4865206C : no 'read' permission

(this happens in both programs, this just happens to be code from the second program.

- So my code probably doesn't work.
- The attached flow charts also mirror what I have done in the code.

Hope you have a great day,

- Gerrit.
